Experience

Technical Trainer, BrainOvision

- Delivered structured training sessions on **Agentic AI frameworks** including **LangGraph**, multi-agent orchestration, and **RAG pipelines** etc.
- Trained **1000+ students** to design and deploy real-world AI projects such as autonomous agents and contextual knowledge systems etc.
- Designed **hands-on labs and project-based learning modules**, bridging theoretical AI concepts with practical implementation.
- Improved student project quality by introducing best practices in **LLM orchestration, API integration, and scalable AI workflows**.

Artificial Intelligence Intern, Tech Mahindra

- Engineered and deployed a **Security AI Companion**, reducing investigation time by **35%**.
- Built a RAG-based architecture using **Gemma & Mistral LLMs, LangChain/Haystack**, and **FAISS/Qdrant** for real-time contextual search and alerts.
- Containerized the solution using **Docker** and **Kubernetes** with an **MCP Server**, ensuring high availability.
- Automated SOC workflows, enhancing productivity and decision-making speed.

Software Developer Intern, Sarat Tech

- Developed a full-stack **Airline Reservation System** using **MERN**, serving **1,000+ users** in real time.
- Implemented **JWT authentication** and role-based access, reducing unauthorized access by **60%**.
- Built a scalable, responsive front-end with **React.js, Node.js, Express.js, MongoDB**.

Frontend Developer , Infomedia Entrepreneurship

- Designed and developed high-performance, user-friendly web interfaces using modern frontend technologies.
- Optimized UI components for responsiveness, accessibility, and user engagement.
- Collaborated with backend teams to ensure seamless API integration and smooth data flow.

Education

B.Tech, Computer Science (AI/ML), Malla Reddy University

Class XII, Little Flower Junior College

Class X, DAV Model School

Skills

Programming: Python, Java, JavaScript

Databases: MySQL, MongoDB, FAISS, Chroma

AI & ML: NLP, Machine Learning, RAG, LLMs, HuggingFace Transformers, LangChain, Prompt Engineering, Model Fine-tuning

Algorithm Development: Custom ML pipelines, Toolkit-based model implementation

Frameworks & Libraries: PyTorch, TensorFlow, scikit-learn, React.js, Node.js, Express.js, Redux

MLOps & DevOps: Docker, Git (GitHub/GitLab), FastAPI, MLflow

Tools & Platforms: Linux, Jupyter, VS Code, Postman, AutoCAD, REST APIs

Projects

Wandrlly AI — LangGraph Inspired Multi-Agent Travel Planner

- Built a LangGraph-based multi-agent architecture integrating autonomous agents (Input, Weather, POI,

Itinerary) for context-driven travel planning through natural language queries.

- Integrated Gemini LLM for reasoning and dynamic itinerary generation, enhancing personalization accuracy by 40 percent via prompt optimization and contextual chaining
- Developed real-time data pipelines with OpenWeather and Geoapify APIs, enabling weather-aware and location-based trip recommendations.
- Engineered modular, scalable workflows using FastAPI and AI orchestration techniques, improving agent communication efficiency by 30 percent.

Fullstack Agentic Placement-Prep Chatbot

- Implemented a Retrieval-Augmented Generation (RAG) chatbot for document-based question answering with 95% context relevance.
- Generated embeddings using Sentence Transformers and integrated with Hugging Face/Ollama LLMs for context-aware responses across 100+ documents.
- Designed a user-friendly Streamlit frontend with chat history and conversation management for up to 50 concurrent users.

OmniFlow AI

- Built an autonomous multi-agent AI system to orchestrate end-to-end marketing operations including trend analysis, campaign generation, lead discovery, outreach automation, publishing, and ROI reporting.
- Designed coordinated AI agents capable of executing marketing workflows autonomously with real-time monitoring and workflow orchestration.
- Developed a full-stack architecture using React.js, FastAPI, Python, and SSE streaming for responsive real-time interactions and agent communication.

MediSight AI: Automated Medical Report Intelligence

- Enhanced OCR-based pipeline to extract structured insights from 100+ medical reports.
- Integrated visualization dashboards and batch processing for scalable document analysis, processing several reports per hour.
- Reduced manual entry time by **70%** and built a modular, scalable system.

Certifications

- **Chatbot Website with Open Source LLMs**
- **Datascience with Python**
- **Machine Learning**

Research Publications

- **Profiling Students Engagement in Full Online Learning**, IJSREM, December 2023
- **Automated Email Sending Using Customized Features**, IJSREM, June 2023
- **Letter Recognition Using Deep Learning**, International Journal of Research Publication and Reviews, May 2024
- **Data Poison Detection in Distributed Machine Learning Systems**, LJIRT, April 2025

Achievements

- Trained 1000+ engineering students in Agentic AI, guiding them to develop **multi-agent projects** leveraging **LangGraph, LLMs, and orchestration frameworks**.
- Secured **2nd Prize** at **Supervity Autopilot Hackathon, Mumbai**, for **building OmniFlow AI using multi-agent AI orchestration, workflow automation, autonomous execution, and scalable AI system design**.
- Participated in the **Global AI Summit 2024**, organized by the Government of Telangana.
- **Data Science with Python Workshop – Elan nVision 2023, IIT Hyderabad**: Gained hands-on experience in data analysis, visualization, and machine learning at IIT Hyderabad's annual tech fest.
